

Csaba Turi

Quality Assurance Automation Engineer | DevOps Professional

Szeged, Hungary|messages@turicsaba.hu|+36 20 433 7195

PROFESSIONAL SUMMARY

Experienced technical professional (8+ years in web testing, 5+ years in PHP development) with extensive expertise in software testing, automation, virtualization, containerization, and Linux system administration. I possess strong problem-solving skills in both on-premise and automated CI/CD environments. My objective is to design, deploy, and maintain highly stable and scalable software architectures and testing infrastructures.

CORE COMPETENCIES

Test Automation & QA

Katalon Studio, Robot Framework, Playwright, Pytest, Browser Library, Postman, Manual testing

Containerization & DevOps

Docker, Docker Compose, Kubernetes (Minikube), Portainer, Jenkins, GitHub Actions, Terraform, Netlify, CI/CD

Programming & Scripting

Python, TypeScript, PHP, Bash

AI & Workflow Automation

n8n, CrewAI, AI agents, Ollama, RunPod Serverless

Operating Systems

Debian, Arch, Ubuntu, Fedora KDE, CachyOS, Windows Server 2022

Databases

MySQL, MSSQL, Supabase

Infrastructure & Tools

Grafana, Prometheus, Netdata, Backup & recovery, Jira, Redmine, Git

Virtualization

VMware, KVM, QEMU

PROFESSIONAL EXPERIENCE & PROJECTS

Test Automation & Quality Assurance (E2E Migration)

Technical Lead / QA Automation Engineer

- Engineered and executed the full-scale migration of automated End-to-End (E2E) test suites from Robot Framework to a native TypeScript-based Playwright environment.
- Developed robust software testing methodologies, continuously improving and refactoring automated testing pipelines.

Playwright

TypeScript

Robot Framework

Pytest

CI/CD

Infrastructure, Virtualization & Containerization

DevOps & Systems Administrator

- Deployed, managed, and maintained virtualization technologies (VMware, KVM, QEMU) and container-based systems.
- Administered Debian-based server environments and implemented automated backup and disaster recovery routines on EXT4 file systems.
- Built and deployed a local Kubernetes testing architecture using Minikube, configured with Docker and Terraform integrations.

Docker

Kubernetes

Terraform

Linux

VMware

Web Testing and Systems Administration

2019 – Present

- Conducted web testing using Katalon Studio, Robot Framework, and Browser Library.
- Managed virtualization environments and servers: VMware, KVM, QEMU, and Windows Server 2022.

Katalon

Robot Framework

Browser Library

Windows Server 2022

CNS Development

2020

- Developed software using PHP 7.1 and the Kohana framework.
- Implemented frontend interfaces (JavaScript, HTML, CSS) and managed MySQL databases.

PHP 7.1

Kohana

JavaScript

HTML/CSS

MySQL
